

Core

Deadline: Sunday of Week 4

Difficulty Level: Basic

Est. Time: 01:00-02:00

Axios Pokemon API

Use Axios and useEffect to create an API call on page load!

Learning Objectives

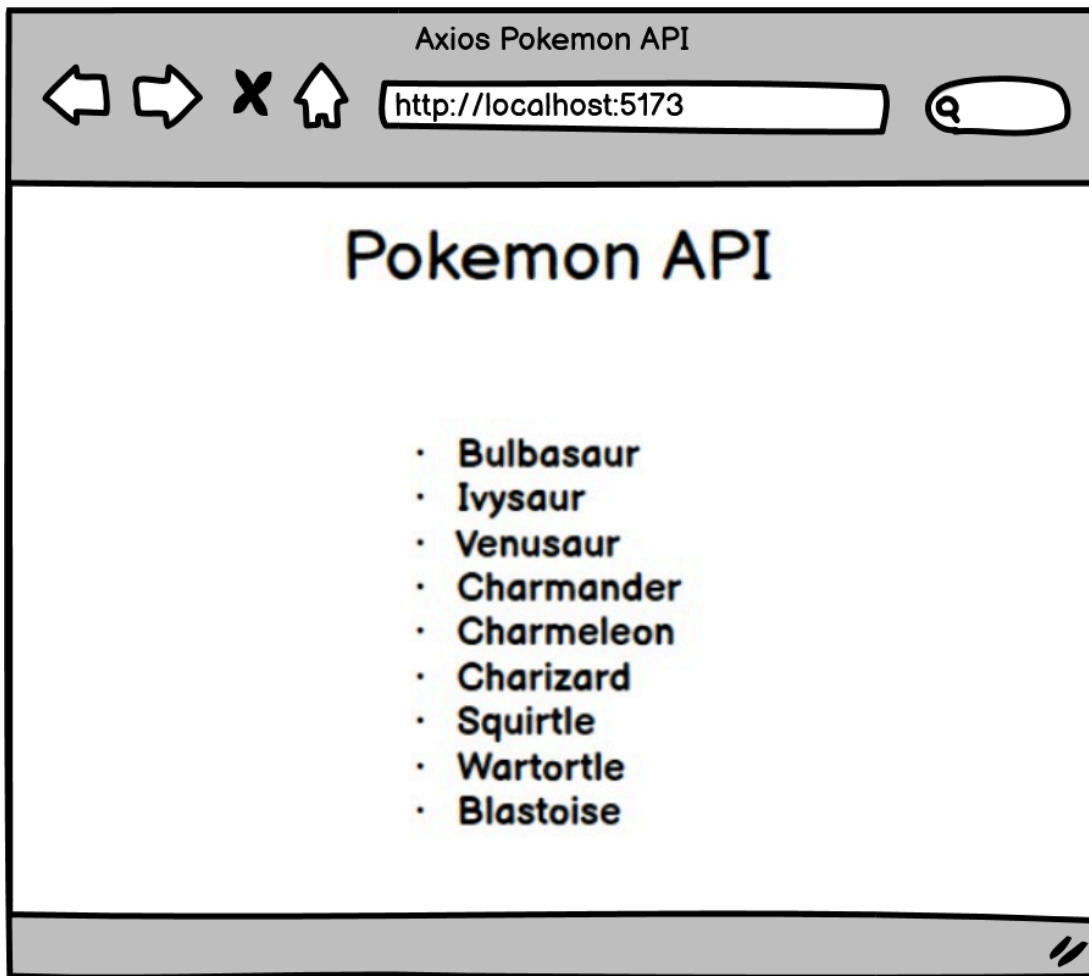

- Build with axios and useEffect to create the example wireframe.

Welcome to another Core assignment! Some students like to explore the assignments before they're finished reading through the lessons, and that's okay! It can be good for your brain to have a preview of what your future challenges might be. However, before you begin this assignment, it's important that you've first:

- Completed the preceding lesson modules
- Taken the knowledge checks to confirm your understanding
- Viewed lecture material related to the assignment topics
- Completed and submitted your practice assignments

Axios Pokemon API

Create a React project that uses the useEffect hook to display the names of all 807 Pokemon using the [Pokemon API](#).

- ☐ Create a React application and install Axios
- ☐ Fetch and output the names of the first 151 Pokemon immediately when the page renders
